

SFT PRO Kit
Advanced, versatile
electrical testing

- Professional-grade testing kit that includes three versatile and efficient tools
- PDL PRO features high-current testing with true impedance technique for accurate measurement
- IRC PRO tester offers insulation testing at 250V, 500V, and 1000V
- RCD PRO provides testing for most commonly found RCD types, including AC, A, and ACS
- Testers boast hands-free functions, large, backlit displays and automatic power-off features
- Durable carry case stores all leads and connectors
- All accessories included

Description

The Socket & See SFT PRO Kit is a professional testing kit that includes three specialised testers for specific testing requirements.

The PDL PRO is a digital earth loop impedance tester that offers high-current, high-resolution testing with a true impedance technique for accurate measurement of PFC and PSC.

Designed as an advanced digital continuity and insulation resistance tester, the IRC PRO offers insulation testing at 250V, 500V, and 1000V, and auto-ranging continuity with wear-indicating test leads. It also features a hazardous voltage LED and an audible tone for user safety.

The RCD PRO is a digital RCD tester that facilitates testing for most commonly found RCD types, including AC, A, and ACS types. Product highlights include a built-in polarity test pad, a hands-free function, and a battery-saving automatic power-off.

Each unique tester is also housed in a protective rubber 'boot', to maximise durability and minimise

wear-and-tear, while the large, backlit displays on each promote navigability and ease of access.

With their advanced features and reliable performance, the SFT PRO Kit is a versatile and efficient testing solution for electrical professionals.
